

ATL Synthetic Automatic Racing Transmission Fluid

Your best choice for all BERT, BRINN And Racing Automatics

BENEFITS

- **Reduces internal temperatures**
- **Reduced noise and vibration levels**
- **Increased wear protection**
- **Increases availability of horsepower and torque to the rear wheels**
- **Very low volatility – resists thinning or thickening due to temperature change**
- **Reduces friction drag – synchronizers, valve bodied, pumps and gears operate in a more positive and smoother action**

ATL Automatic Racing Transmission Fluid (ARTF) was developed specifically for the motorsports industry. ARTF surpasses all current automatic type transmission fluids in wear protection, heat transfer and oxidation life. ARTF is formulated with the most advanced synthetic base stock fluids and additive technology available to date.

These ultra pure base stocks provide excellent thermal stability by themselves alone, and then we incorporate a highly effective anti-oxidation additive to boost the level of heat resistance. Also included are additives for rust protection, deposit control, anti-wear, EP modifiers and agents for controlling corrosion, moisture and dirt. These components and technology are why the ARTF is the only choice of many professional motorsports teams.

ATL's Automatic Racing Transmission Fluid is used and recommended by:

Dale McDowell – Xtreme Dirt Late Model Champion Mike
Belzano – Renegade Stars Series
Jack Nunez – NHRA / IHRA
