

# Air Tool Lube

## BENEFITS

- Cleans
- Reduces Friction
- Protects from Rust
- Extends the Life of Air Tools
- Protects Against Sludge & Varnish
- Provides the Equipment with Superior Air Sealing & Lubrication

**ATL's Air Tool Lube** was scientifically designed to stop moisture buildup and corrosion, while providing maximum wear protection and exceptional lubricity.

**ATL's Air Tool Lube** is a new generation synthetic lubricant containing a high quality detergent package for cleaning and dissolving sludge and grime that builds up over time, robbing air tools of performance.

**ATL's Air Tool Lube** also contains advanced lubricity additives that reduce wear and friction, which allows the tool to run cooler, last longer and perform to maximum speed and torque specification.

**ATL's Air Tool Lube** rust and corrosion inhibitors are the finest quality available in the industry. They attack moisture and other contaminants and keep them in suspension so that they can safely exit through the tool's air exhaust, eliminating the chance of build up.

**ATL's Air Tool Lube** can be used where air tool lubrication is recommended to extend the life and improve the operation of common air tools.

## APPLICATIONS

- For all piston-type and rotary air tools
- Any pneumatic air tool that requires an oil lubricant
- Ideal lubricant for inline oil systems

## TRY THIS TEST

Take your air tool and press the trigger so that it revs up. Then lube it with ATL's Air Tool Lube and press the trigger again. You will notice a significant increase in RPMs. Less Friction = Longer Life

Directions: Lubricate per manufacturer's directions

Packaging Sizes:

1 Gal. Jugs (4/case)

55 Gal. Drums
